

# AQUABOX

**Aquabox is a high capacity underground modular system for efficient stormwater retention, infiltration and detention.**

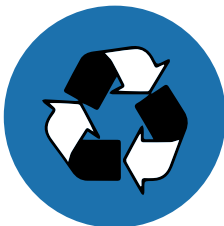

The Aquabox system has been engineered for efficient stormwater retention and is suitable for different applications. Aquabox is an underground plastic module to collect and store water. This system is efficient for temporarily collecting rainwater and releasing it with a time delay into the sewage infrastructure, preventing flooding in urban areas.

**FAST AND EASY  
INSTALLATION**

**LIGHTWEIGHT MODULES AND  
VERSATILE**

**MADE OF RECYCLED POLYPROPYLENE**
