

HAZGARD GEOMEMBRANES

DEMANDING APPLICATIONS NEED SECURE AND DURABLE SECONDARY CONTAINMENT SYSTEMS

A HAZGARD® geomembrane provides the strength and durability required for secondary spill containment. Uniquely resistant to a wide range of chemicals, including hydrocarbons, solvents, acids, bases, and salts, HAZGARD® geomembranes are some of the most chemically-resistant materials available today.

Available in three material formulations, this family of geomembranes provides secondary containment for a wide variety of buried and exposed applications. HAZGARD® geomembranes are manufactured in a distinctive and highly visible red color for easy identification. **For up-to-date HAZGARD® specifications, please scan the QR code.**

AVAILABLE COST SAVINGS AND SUPERIOR QUALITY

Factory prefabrication, resulting in consistent welding. Save time and money during installation.

HIGHLY VISIBLE RED COLORING

The distinctive red color provides clear identification in buried applications.

EXCELLENT CHEMICAL RESISTANCE

Designed for Secondary Containment of flammable and combustible liquids including gasoline, diesels, jet fuels, oils, and lubricants.
